Mid Value	7.0%	
Equity Sector	20.0%	
International Equity	29.0%	
Alternative Equity	5.0%	
Alternative FI	11.0%	
Cash	2.0%	

INVESTMENT STRATEGY:

The Portfolio mainly invests its assets in equity exchange-traded funds (ETFs) but also includes alternative ETFs selected from the global investment opportunity set. The managers may invest a small amount in fixed income. The Portfolio is anchored with a strategic asset allocation using our proprietary capital market expectations for the next several years. We complement our strategic asset allocations with tactical asset allocations that attempt to take advantage of the near-term opportunities that exist in every market.

INVESTMENT APPROACH:

- » We pursue **global investment opportunities** beyond the traditional “style box” approaches. We implement our investment themes primarily utilizing exchange-traded funds (ETFs) for diversification, specificity and cost control.
- » We anchor our portfolios with **strategic asset allocations** that are based on our proprietary capital market expectations for the next 3-5 years.
- » We complement our strategic asset allocations with **tactical asset allocations** that attempt to take advantage of the near-term opportunities that exist in every market.
- » We overlay our proprietary **Cash Indicator** to help identify periods of time when it may be advantageous to temporarily raise our cash allocation to 25% or 50% of the portfolio so that we might be able to redeploy the cash in the future at lower market valuations.

We have carefully constructed our investment management process so that each component is designed to deliver results, and to be easily understood.

TOP 10 PORTFOLIO HOLDINGS:

	Ticker	Weighting
WisdomTree Intl Equity	DWM	15.00%
iShares MSCI USA Momentum	MTUM	12.00%

Stringer Asset Management LLC is a registered investment adviser that generally provides services through model portfolios on a sub-advisory business. The firm primarily allocates client's investment management assets among exchange-traded funds ("ETFs") and secondarily among mutual funds. A fully compliant GIPS presentation along with a complete list and description of all composites is available at www.stringeram.com or by calling 901-800-2956. Stringer Asset Management LLC claims compliance with the Global Investment Performance Standards (GIPS®). The Growth Composite includes all portfolios that mainly invest in equity and alternative ETFs selected from the global investment opportunity set. The Growth Composite has risk characteristics similar to that of the broad equity market and include but are not limited to equity risk, international investing risk and capitalization risk. The total returns presented are gross and net of fees. Advisory fees and any other expenses incurred in the management of the account will reduce actual returns.

The benchmark is the MSCI ACWI Index rebalanced quarterly as of January 1, 2016. The benchmark is market-cap weighted and is composed of several country-specific indices. Sources of foreign exchange rates may be different between the composite and the benchmark; however, there have not been material differences to date. Prior to January 1, 2016, the benchmark was the MSCI World Index rebalanced quarterly. Prior to January 1, 2015, the blended benchmark was 70% Russell 3000 Index and 30% MSCI ACWI xUS Index rebalanced quarterly. In both cases, the benchmark was retroactively changed to more closely follow our investment strategy. The index represented does not bear transaction costs or management fees, and cannot be actually bought or sold. It is not possible to invest directly in an index. For index definitions, see the Index Definitions section at the end of this document. The U.S. Dollar is the currency used to express performance. Material use of leverage, derivatives and short positions are not used in this composite.

Past performance is not indicative of future results. The investment return and principal value of an investment will fluctuate so that an investor's shares when redeemed may be worth more or less than their original cost. Current performance may be higher or lower than the performance data quoted. Advisory fees and any other expenses incurred in the management of the account will reduce actual returns. The performance of any individual portfolio may not be considered comparable to the Composite performance.

ETFs are offered by prospectus. Investors should carefully consider a fund's investment objectives, risks and charges before investing. The prospectus contains this and other information. Your financial advisor can provide prospectuses which you should read carefully before investing. Any discussion of the individual securities that comprise a portfolio is provided for informational purposes only and should not be deemed a recommendation to buy or sell any security.

Cash Indicator - This blend consists of the VIX Index and TED Spread. Refer to the Index Definitions below.

The benchmark index is referred to for comparative purposes only and are not necessarily intended to parallel the risk or investment approach of the accounts included in the composites. This index was chosen to give perspective on the risk management philosophy and asset allocation portfolio management process for the composite performances.

Index Definitions: *MSCI ACWI (Net) Index* – This Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI Index consists of 23 developed and 23 emerging market country indexes. Net total return includes the reinvestment of dividends after the deduction of withholding taxes, using a tax rate applicable to non-resident institutional investors who do not benefit from double taxation treaties. *VIX Index* – This Index is the Chicago Board Options Exchange (CBOE) Volatility Index and reflects a market estimate of future volatility based on the weighted average of the implied volatilities for a wide range of strikes. *VXO Index* is used for data prior to 1990. This index is a measure of the CBOE OEX volatility and reflects a market estimate of future volatility, based on the weighted average of the implied volatilities of 8 OEX calls and puts. *Ted Spread* – This measure of perceived credit risk is calculated by taking the LIBOR USD 3-month minus the 3-Month U.S. Government yield.

Statistical Definitions: *Standard deviation* – A statistical measure of volatility, standard deviation is often used as an indicator of the 'risk' associated with a return series. Standard deviation of return measures the average deviations of a return series from its mean. A large standard deviation implies that there have been large swings in the return series of the manager. *Maximum draw-down* – This is the maximum loss (compounded, not annualized) that the manager incurred during any sub-period of the entire time period. Conceptually, this is the biggest "peak to trough" loss. The calculation looks at all sub-periods of the time period in question and calculates the compound return of the manager over that period. The maximum drawdown is the minimum of zero and all these compounded returns.
